

SUSPENDED ACCESS REVEAL

Suspended access reveal mounting system uses a series of rails and clips that are mounted to the back of the panels. The panels are then suspended to the desired height and locked in place to the desired reveal, gives a floating ceiling effect.

GUIDELINES:

- A minimum space of 10" (250mm) from the back of the panel and a 1" (50mm) perimeter is required for channel holding clip installation purposes.
- Any items located in the ceiling or wall must be independently supported (ie. Lights, diffusers, sprinklers). The panel are not structurally capable of supporting any weight.
- Speaker grilles are recommended to be visibly mounted at the face of the panel. Speaker function creates air movement and premature soiling will develop onto the panel.

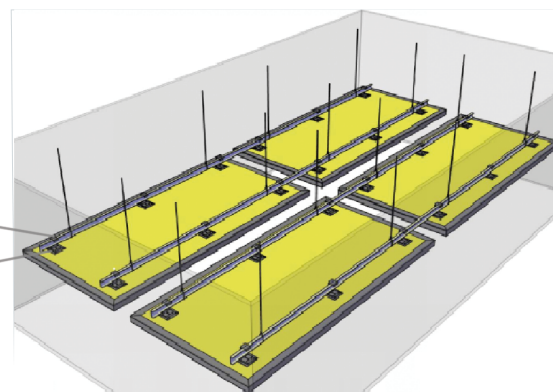

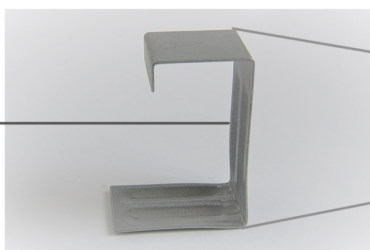

FEATURES:

- Creates the effect of a floating ceiling.
- Panel T-Clips are pre-fastened to panels.
- Custom flat and curved shapes are easily incorporated to the Suspended Reveal system.
- Individual panels are accessible.

MAINTENANCE

Contact Sky Acoustics for suspended access reveal maintenance instructions.
