## SUSPENDED REVEAL MOUNTING

## SUSPENDED REVEAL

Suspended reveal mounting systems use a series of rails and clips that are mounted to the back of the panels. The panels are then separated to the desired reveal and locked/fastened in place to give the panels a “floating” effect.

### **GUIDELINES:**

- Typically a 4" (100mm) reveal along the perimeter is recommended for installation purposes.
- Requires a minimum of 2" clearance from the back of the panels to the T-Bar. All T-Bars and T-Bar hardware for suspension and attachments are not supplied by Sky Acoustics.
- Any items or fixtures must be independently supported (ie. Lights, diffusers, sprinklers). The panel are not structurally capable of supporting any weight.

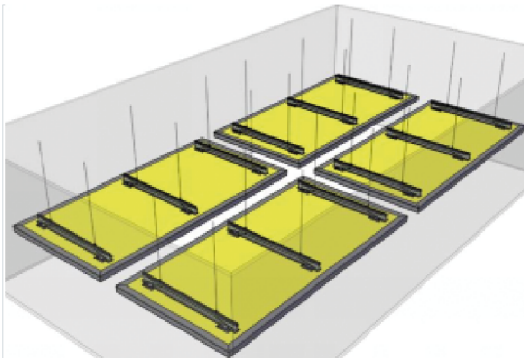

### **FEATURES:**

- Creates the effect of a floating ceiling
- Concealed mounting system
- T-Plates are pre-fastened to panels
- Custom flat and curved shapes are easily incorporated to the Suspended Reveal system.

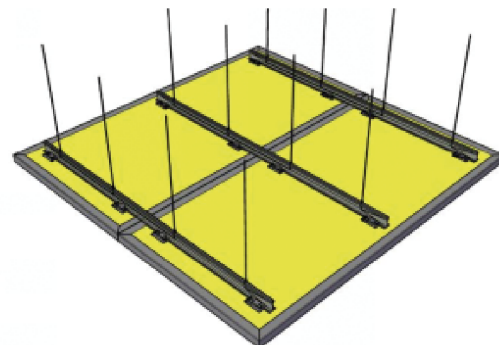

### **MAINTENANCE**

Contact Sky Acoustics for Direct Suspended maintenance instructions.
